We are on the threshold of seeing significant changes in health professions education. Academic authorities are mulling over alterations to the curriculum to build teams of health professionals to change with the times.

There is little doubt that Allied Health and Health Care Professionals have the potential to create beneficial, transformative, and lasting reforms in healthcare. This involves collaborative efforts to teaching learning so that domains of knowledge, skills, and attitude are all incorporated to give a cohesive approach to health professions education.

All the healthcare departments at Era University are actively transforming the whole institution. The Department of Health Professions Education trains all health professionals in the nuances of education. The University has also modeled interprofessional education, bringing different disciplines together to enhance patient safety.

Hence, this year under the aegis of AHAHPER, we are organizing a National Conference on **December 8th and 9th** to bring various healthcare professionals on one platform. We welcome you to the National Conference on 'Together for Health.'

Hoping that this conference becomes a trendsetter, and we all benefit from all the deliberations.
